Robot Motion Planning (The Kluwer International Series in Engineering and Computer Science) Jean-Claude Latombe

One of the ultimate goals in Robotics is to create autonomous robots. Such robots will accept high-level descriptions of tasks and will execute them without further human intervention. The input descriptions will specify what the user wants done rather than how to do it. The robots will be any kind of versatile mechanical device equipped with actuators and sensors under the control of a computing system. Making progress toward autonomous robots is of major practical interest in a wide variety of application domains including manufacturing, construction, waste management, space exploration, undersea work, assistance for the disabled, and medical surgery. It is also of great technical interest, especially for Computer Science, because it raises challenging and rich computational issues from which new concepts of broad usefulness are likely to emerge. Developing the technologies necessary for autonomous robots is a formidable undertaking with deep interweaved ramifications in automated reasoning, perception and control. It raises many important problems. One of them - motion planning - is the central theme of this book. It can be loosely stated as follows: How can a robot decide what motions to perform in order to achieve goal arrangements of physical objects? This capability is eminently necessary since, by definition, a robot accomplishes tasks by moving in the real world. The minimum one would expect from an autonomous robot is the ability to plan its own motions.

From reader reviews:

Michael Mazzariello:

Book is to be different for every grade. Book for children until adult are different content. As we know that book is very important usually. The book Robot Motion Planning (The Kluwer International Series in Engineering and Computer Science) has been making you to know about other information and of course you can take more information. It is quite advantages for you. The book Robot Motion Planning (The Kluwer International Series in Engineering and Computer Science) is not only giving you a lot more new information but also being your friend when you feel bored. You can spend your own spend time to read your reserve. Try to make relationship while using book Robot Motion Planning (The Kluwer International Series in Engineering and Computer Science). You never sense lose out for everything in case you read some books.

Raymond Childers:

Many people spending their time frame by playing outside having friends, fun activity along with family or just watching TV all day every day. You can have new activity to invest your whole day by reading through a book. Ugh, do you consider reading a book really can hard because you have to take the book everywhere? It okay you can have the e-book, getting everywhere you want in your Smart phone. Like Robot Motion Planning (The Kluwer International Series in Engineering and Computer Science) which is keeping the e-book version. So , why not try out this book? Let's see.

Zenaida Jackson:

Is it an individual who having spare time and then spend it whole day by watching television programs or just laying on the bed? Do you need something totally new? This Robot Motion Planning (The Kluwer International Series in Engineering and Computer Science) can be the response, oh how comes? A book you know. You are consequently out of date, spending your free time by reading in this brand new era is common not a nerd activity. So what these books have than the others?

Jonathan Ouzts:

You will get this Robot Motion Planning (The Kluwer International Series in Engineering and Computer Science) by look at the bookstore or Mall. Just simply viewing or reviewing it could possibly to be your solve challenge if you get difficulties for the knowledge. Kinds of this publication are various. Not only through written or printed but additionally can you enjoy this book through e-book. In the modern era just like now, you just looking by your mobile phone and searching what their problem. Right now, choose your current ways to get more information about your guide. It is most important to arrange yourself to make your knowledge are still revise. Let's try to choose proper ways for you.
